

AdapteCCa and Climate-ADAPT two **CONNECTED** European adaptation platforms

AdapteCCa.es

Climate ADAPT SHARING ADAPTATION INFORMATION ACROSS EUROPE

Did you know?

The National Platform for Adaptation to Climate Change **AdapteCCa** and the European platform **Climate-ADAPT** are linked through a series of practical cases:

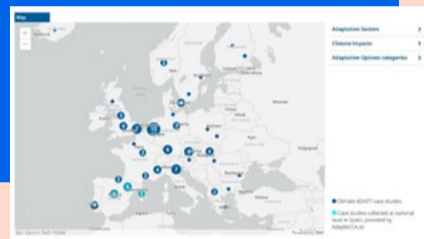

They are experiences, initiatives and/or projects that are intended to prepare or set in motion actions specifically for adapting to climate change.

They are very useful for explaining the policy and actions for adaptation and for promoting them in the regions through the participation of the main actors (public bodies, citizens, etc.)

WHAT DOES THIS MEAN?

Climate-ADAPT selects some practical cases included in **AdapteCCa** and adds them directly to its website. These cases are marked on the map:

AdapteCCa also selects practical cases from **Climate-ADAPT** and also includes them in its practical case module. These are projects financed by European funding or LIFE projects. These cases are shown on the map:

THE RESULT OF THIS CONNECTION

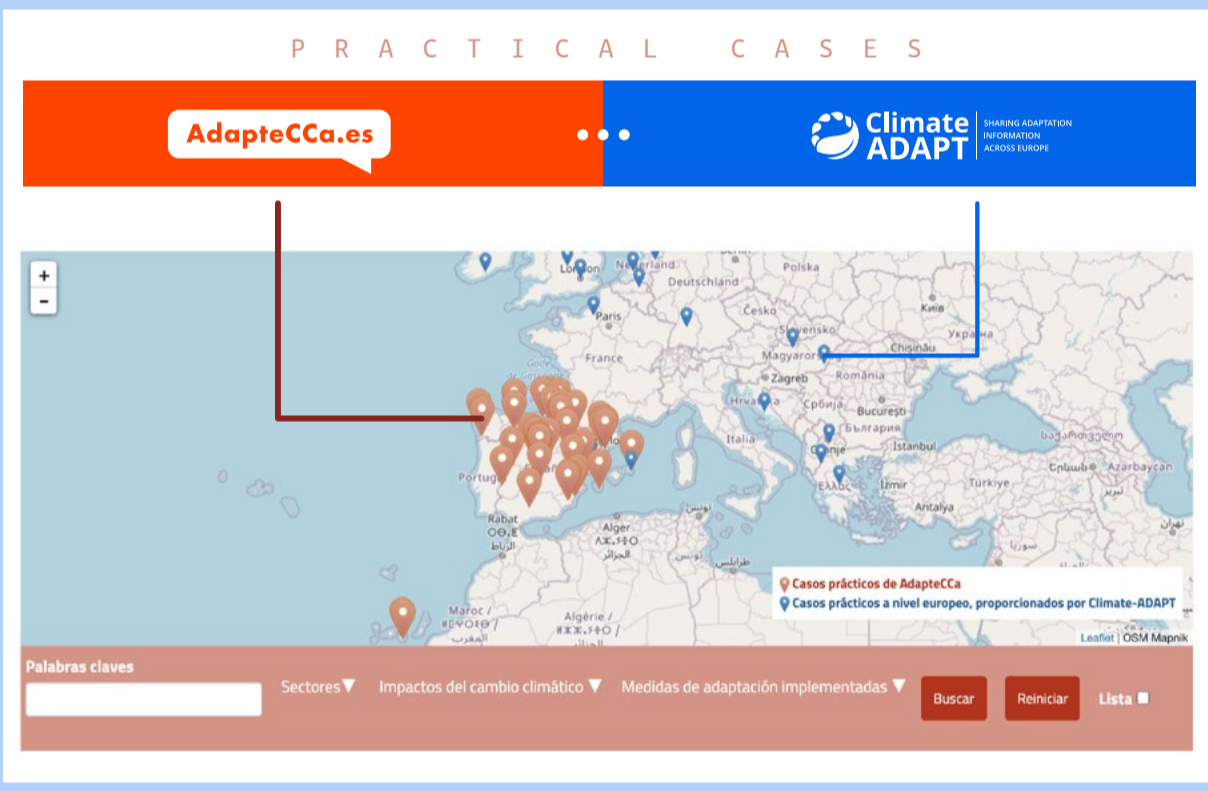

An exchange of **inspirational experiences** in adaptation between different European countries

Shared **knowledge and good practices**, to strengthen coordination and cooperation between both platforms

Discover outstanding examples that help to **develop the European Adaptation Strategy 2021**

HOW WAS THIS CONNECTION MADE? ROAD MAP / STEPS TAKEN

LIFE SHARA

INSPIRATION

As the next step, those running the Spanish platform used the **metadata sheets from practical cases available in Climate-ADAPT as inspiration** for describing the Spanish cases and used real cases to test whether the metadata categories were suited to the specific purpose of identifying examples of good practices.

The **LIFE SHARA** project, first of all, reviewed the **methodology applied by Climate-ADAPT to select its case studies**. It has 11 selection criteria, where the first 3 are criteria for exclusion or inclusion:

- **Clear identification of each case in relation with adaptation to climate change:** they must lower vulnerability to climate change and deal with its impacts.
- **Real application:** the cases must already be started or in operation.
- **Access to the cases and the option to assess them.**

This methodology was adapted to the specific characteristics of the Spanish case.

4

A final case study template was then prepared for all the Spanish case studies, with a description.

INFORMATION

Finally, to make the connection between both platforms operational, **AdapteCCa** downloads an **Excel file from the Climate-ADAPT website every day**, in which each line of the Excel file contains the information for each practical case. **AdapteCCa** then reads this Excel file and saves the information about the practical cases in its database (creating one if it is new or updating it if it is already created).

INTER-CONNECTION
